ABOUT ME

I'm an skilled Angular developer with two years of experience creating and maintaining high-quality web applications. I'm constantly seeking to enhance my skills and explore new ways to improve user experience in the applications I'm involved with. I'm highly motivated to contribute in challenging projects.

PROFESSIONAL EXPERIENCE

Front-end Developer at CONSISTE CONSULTORIA E SISTEMAS LTDA

Jan 2022 - PRESENT

As a Front-end Developer at CONSISTE, I play a key role in creating and maintaining multiple Angular applications within CONSISTE's ecosystem. Additionally, I conceptualize and implement Angular libraries to optimize the development process of new applications and centralize their maintenance.

CONSISTE is a company dedicated to delivering standardized data from Brazil public entities such as CADASTUR and IBGE. I focus my efforts on creating and maintaining solutions that make accessing this data seamless. This includes the development and maintenance of an advanced table component with filtering, aggregation, and sorting functionalities, as well as implementing dynamic charts using the APACHE ECHARTS library.
Among the solutions I've developed at CONSISTE, the most notable one so far is an application for creating dynamic dashboards similar to Microsoft's Power BI, integrating data from the aforementioned public entities. In this app, users have access to a wide range of powerful features to present their data.
They can add to their Dashboard:
- Powerful charts from ECHARTS,
- Rich text editor provided by CKEDITOR 5 which can be used for making analyses on the presented data
- Custom tables that are part of CONSISTE's own component library which I had the pleasure on contribute on developing.
In addition they can dynamically filter the data presented and change the styles too make each presentation unique.

Besides my front-end responsibilities, I occasionally take on maintenance tasks for API routes developed in Java Spring Boot.
